

Angel Coffee Maker Thermos™

~ Features ~

1 - MAKES THE BEST COFFEE: Every Coffee Maker in the World relies on exposing ground coffee to hot water. The *Angel* takes this concept to the nth degree, by exposing 100% of the ground coffee to both "Immersion brewing" and "Pressurized brewing" 100% of the time with 0% heat loss during initial brewing. This patented technique is unique to the *Angel* and is what makes *Angel* coffee so "smooth" and delicious!

2 - QUICK TO MAKE: Simply place the desired amount of **coarse ground coffee** in the *Angel*, add near boiling water, tighten the cap, wait 3+ minutes, and pour out "smooth", hot, delicious coffee. Longer brewing times (even overnite) do NOT result in additional bitterness. The built-in **Screen** holds back the coffee grounds.

3 - TRANSPORTABLE: Make your *Angel* Coffee at home and then take it outdoors with you! Perfect for campers, construction workers, firefighters, hikers, hunters, ice fishermen, nature watchers, office workers, picnickers, police, restaurant diners, sailors, snow plow drivers, soldiers, utility line workers, etc.

4 - KEEPS HOT or COLD FOR HOURS: The double-walled, vacuum-sealed *Angel* keeps your next cup of coffee significantly hotter for 3-5 hours. In fact, after 30 minutes, the coffee in the *Angel* is 12 deg. hotter than coffee in a double-walled, metal, French Press. Voila!

5 - BOTH LARGE + SMALL POURS: Most Thermoses only have a large, wide-mouth cap-opening. This means a quick loss in temperature (hot or cold) every time the large cap is removed. Further, with large openings, it is easier for liquid to accidentally slosh out messily in a moving car or boat. In contrast, the *Angel* Thermos features both a **large opening** (to easily add hot or cold ingredients) and a **small opening** (to make controlled, precise pours, even at a restaurant table).

6 - FOUR COLOR CONTENT INDICATOR: The **Cap** uniquely features a selectable, 4-color, **Content Indicator** to let you know what is in your *Angel*. The 4 colors are **Brown**, **Orange**, **Blue**, and **White**. For example, you can select **Brown** for regular coffee or other hot liquid (eg. tea), **Orange** for decaf coffee, **Blue** for a cold liquid (eg. cold beer, ice water, or kombucha), or **White** for alcohol (eg. martini shaker containing vodka, lemons, and ice). So, if you have 4 *Angels* sitting on the kitchen counter, the color of the **Content Indicator** will quickly alert you to what is inside the *Angel* without you having to open it up and look!

7 - THERMOMETER: The **Cap** also features a **Thermometer** to convey the temperature of the liquid inside your *Angel*. Just invert the *Angel* to put the thermometer probe in contact with the hot coffee.

8 - LIQUIDS DO NOT TOUCH PLASTIC: In the *Angel*, liquids ONLY contact "316 Marine grade" stainless steel and a small food-grade silicon gasket - NEVER plastic. Even the **Pour Spout** is lined with a SS tube. This is healthier, as hot liquids can leach harmful petrochemicals out of plastic and into the liquid you drink!

9 - QUICK TO CLEAN: Ever tried to take apart and clean a French Press? Makes you NOT want to make any more coffee that day! In contrast, cleaning the *Angel* is a flick of the wrist and a quick rise. You can easily make one Thermos of coffee after another in minutes!

10 - ECO FRIENDLY: The *Angel* only needs ground coffee and hot water. Worms in the landfill love coffee grounds! The *Angel* generates ZERO paper or plastic waste, which clogs landfills.
